

Videowall

When one digital screen is not enough we recommend the video wall. Make a statement and do it in style with our minimal edge technology. Engage with your customer with multi touch interactivity and leave them with a memorable experience.

Multi-touch interactivity

Video walls can easily be transformed into a multi-touch surface to deliver a unique interactive experience. Is your business an innovator or a follower? We are seeing more innovative businesses use this technology to engage with their, customers and visitors like never before.

Functional and easy to use

Video walls can automate many customer service operations, with the capability to display any manner of information. You will be used to seeing them in airports, bus and train stations displaying arrival and departure times, but the future will see them used for everything from wayfinding, to advertising goods and services in retail environments. We have seen them used at cinemas in the foyer, even at private schools performing arts buildings.

Designed to be used in:

- Education
- Advertising
- Gaming & Interactive
- Retail and Commercial areas

This product is available for both short and long term hire.

- Optional OPS insert for an all-in-one solution

What benefits can a video wall bring to your organisation?

A video wall is an attention seeker, if you are trying to get a particular message across – whether for advertising, selling or information display – chances are you want a solution that works. Video walls were traditionally used in control applications like security, plane control, train control etc. Video walls are increasingly making the transition from mission control to commercial spaces, and are now frequently cropping up in corporate, leisure and retail applications.

These high impact displays can certainly pack a visual punch, but equally, they serve as an effective business tool and can underpin a range of operations.

Video walls can automate many customer service operations, with the capability to display any manner of information.
